TOP OPEN LLMs

Best Open-Source Models

The open-source LLM ecosystem has rapidly evolved, moving beyond Llama 2 and Vicuna. In 2023, new models like MPT-7b, Falcon, and StableLM emerged, making it essential to choose the right model for production systems.

Mixtral-8x7B

from Mistral AI is the first open-weight model to achieve better than GPT-3.5 performance. is a pretrained generative Sparse Mixture of Experts. The Mistral-8x7B outperforms Llama 2 70B

Mistral 7B

is a 7-billion-parameter LLM developed by Mistral AI. It outperforms Llama 2 13B on all benchmarks and uses Sliding Window Attention (SWA) to optimize the model's attention process, resulting in significant speed improvements.

Zephyr 7B

is a large language model (LLM) developed by Hugging Face. It's a fine-tuned version of the Mistral-7B model, trained on a mix of publicly available and synthetic datasets using Direct Preference Optimization (DPO). The model is primarily designed to act as a helpful assistant and is primarily used for tasks in English.

Llama 2

Developed by Meta AI, Llama 2 is an open source LLM with pretrained models ranging from 7B to 70B parameters. It outperforms other open source LLMs on various benchmarks, including reasoning, coding, proficiency, and knowledge tests. Llama 2 also offers fine-tuned models like Llama Chat and Code Llama.

Yi 34B

Yi 34B is a bilingual (English and Chinese) base model with 34 billion parameters, developed by 01.AI. It outperforms larger open models like Falcon-180B and Meta LlaMa2-70B on Hugging Face's ranking.
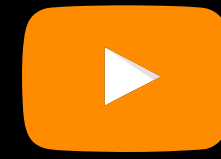

Save time with **ALIMA**!
This tool helps with **OpenAI**
APIS **tasks** like PDF chat, source
info, email writing, and more. It
also translates and converts
speech to text.

Thanks !!

if you enjoyed this, please:

- **Follow me** for more badass content
- **Share** this post so others can learn as well
- **Hit the notification** so you don't miss a thing

And most importantly...

Keep on learning

Happy Coding
